- Heavy use of all-caps text

SuccessFactors — 45/100 (may be filtered)

Formatting 95 Keywords 93 Sections 0 Experience 86 Education 0 Quantification 5

- Heavy use of all-caps text

What to fix first

[critical] List more skills explicitly

Taleo relies on Boolean keyword search over a literal skills list. Fewer than five detected skills leaves recruiters little to match against.

Add a dedicated Skills section naming tools, languages and platforms in full.

[critical] Add the standard resume sections

Taleo maps content to fixed fields by section header. A missing section means an empty field on the candidate record.

Include Experience, Education and Skills with conventional headings.

[critical] Quantify achievements

Include specific metrics and statistics to demonstrate the impact of their work, such as the 24x throughput improvement

[critical] Add start and end dates to every role

SuccessFactors builds a structured employment timeline. Roles without dates cannot be placed on it and may be discarded.

Use a consistent format such as "Jan 2023 – Dec 2024" or "01/2023 – 12/2024".

[high] Emphasize transferable skills

Highlight experience with Databricks, LangGraph, and other relevant tools to showcase expertise

[high] Give each role a clear title, employer and date line

The Textkernel parser expects a recognisable header per role. Without one it cannot split your history

into discrete positions.

Format each entry as "Job Title | Company | Location | Dates" on its own line.

[high] Emphasize relevant education

Highlight the candidate's M.S. in Artificial Intelligence and relevant coursework

[medium] Highlight innovative projects

Emphasize the unique aspects of their projects, such as the use of LangGraph and multi-agent orchestration
