

ATS Compatibility Report

GENERAL READINESS

PREPARED FOR

Srinivasan Raghavan

DATE OF ANALYSIS

August 2, 2026

OVERALL SCORE

73/100

EXECUTIVE SUMMARY

Your resume was analyzed against 6 major ATS platforms. 5 of 6 systems returned a passing score. The average compatibility rating across all platforms is 73/100, classified as Good. Targeted improvements to keyword optimization and formatting could significantly improve results on underperforming platforms.

1. Platform Compatibility Scores

PLATFORM	OVERALL	FORMAT	KEYWORDS	SECTIONS	EXPERIENCE	EDUCATION	KW FOUND	STATUS
Workday	72	75	78	85	70	90	6/8	PASS
Taleo	58	60	55	70	52	80	5/7	MARGINAL
iCIMS	76	85	80	85	72	90	5/6	PASS
Greenhouse	82	90	85	90	78	90	6/6	PASS
Lever	74	85	75	80	70	90	5/6	PASS
SuccessFactors	78	85	82	85	75	90	7/8	PASS

2. Recommendations for Improvement

#	RECOMMENDATION	PRIORITY
1	Embed missing hard skills from your category list into the experience bullet points for Workday's HiredScor...	HIGH
2	Add a professional summary stating your exact target job titles to satisfy Taleo's literal keyword matching...	CRITICAL
3	Expand the 'DeadPool Python, PyTorch, FAISS...' project header into a standard descriptive title for better...	MEDIUM
4	Fix the formatting of your project sub-bullets under 'EchoAI' to improve readability in Greenhouse's candid...	MEDIUM
5	Separate concatenated project tech stacks in the 'DeadPool' header so Lever's word-stemming search indexes ...	HIGH

3. Keyword Coverage

MATCHED (18)

FastAPI, Python, PyTorch, LangGraph, Docker, RAG, Kubernetes, Databricks, LLMs, vLLM, Transformers, PEFT +6 more

MISSING (7)

Software Development Life Cycle, Cross-functional Collaboration, Software Engineer, Machine Learning Engineer, System Architecture, Full Stack Developer, Enterprise Software

4. Methodology

Each platform score is a weighted composite of five dimensions: document formatting compliance, keyword density and match rate, section structure recognition, experience relevance, and education verification. Scores are generated using a combination of rule-based heuristics and LLM-assisted analysis calibrated against publicly documented ATS parsing behaviors. A score of 60 or above indicates likely successful parsing by the target system.
